

DC Advisory - Corporate Finance

AT A GLANCE:

Company

- Corporate finance
- 130 users

Key Risk

Emails being accidentally sent the wrong recipient containing sensitive information

Results

- Guardian proved effective in preventing misaddressed emails
- Guardian's machine learning causes the users to only see contextual and relevant flags
- The CheckRecipient portal allows DC Advisory to review what emails have been caught and prove value internally

Products

GUARDIAN

RULEBUILDER

Business Background & Risks

DC Advisory is a mid-market corporate finance company with a specific expertise in cross-border transactions. Operating in a highly regulated industry, it is important for them to take measures to ensure that their client's data is adequately protected.

From the outset, the team at DC Advisory understood that the risk of sending highly sensitive information to the wrong person accidentally could seriously harm the reputation and integrity of the firm. On the back of this, they set out to discover a solution that could intelligently identify when an email was misaddressed and provide minimum disruption to the end user.

“We are particularly impressed by how intelligent the CheckRecipient platform is and how little user disruption it has caused.” Matthew Parker, Senior Legal Counsel

Solution & Benefits

After having a demo of the CheckRecipient platform, DC Advisory decided to take a free trial. At the end of the trial period, CheckRecipient presented a detailed report containing a high-level overview on DC Advisory's email statistics and a deep dive into the threats within misaddressed emails via Guardian.

The results from this report indicated that the Guardian was able to detect and prevent misaddressed emails within the organisation and remove the threat to the organisation, whilst being non-obtrusive to the end user.

As a result of a quick deployment and the lack of administrative input, DC Advisory decided to roll-out firm-wide. DC Advisory have since been incredibly pleased with the product and are looking forward to exploring other products on CheckRecipient's roadmap (such as the IP Theft threat module).

About CheckRecipient

CheckRecipient is a next-generation email security technology to prevent highly sensitive information being sent to the wrong people. CheckRecipient uses machine learning to analyse historical email data and automatically identify anomalies and mistakes on outgoing emails which may result in inadvertent data loss. Some of the world's largest organisations rely on CheckRecipient's technology across the financial, legal, professional services and biotech sectors. The company is headquartered in London, UK.
